

# DATA SHEET

## IBC MIXERS - TRI - CLAMP MOUNTED

Euromixers Tri-clamp mounted mixers mount quickly, easily and securely directly onto the mixing vessel using a standard Tri-clamp fitting, thus enabling the mixer to be removed for cleaning or moving the mixer / vessel to another location.

Direct and Gear drives and gear drive mixers are available to optimise mixing in a range of vessels including stainless steel IBC's and transportable vessels.

Mixers can be fitted with dry running mechanical seals or lip seals

The picture illustrates a Tri-clamp mounted mixer with hand operated quick connect coupling for easy shaft removal / fitting without the need for tools.
